## iUMENTAS Life Science®

### Our believes

Iumentas Life Science believes on “Go green” and “Sustainable Livestock” policy. We do not use any antibiotic, steroid and/or hormone in our product. We do believe on constant progress and discoveries for wellbeing of livestock and companion animals. We do rely on natural resources to minimize negative impacts on environment as well as to reduce potential health hazards on animals. We deal only on nutritional products that in term improve the nutritional flaws in the animals. We are careful about our raw materials. Increasing incomes, changing diets, and population growth have led to increased demand and made the livestock sector one of the fastest growing agricultural sub-sectors. This represents a major opportunity for smallholders, agribusiness, and job creators throughout the livestock supply chain. However, if not properly managed, this growth risks accentuating sustainability issues that span equity, environmental impacts, and public health. We are therefore obliged to provide a right, compatible, effective, safe and decent additional nutrition to companion animals and livestock.
